Preface	6
1 General topics	12
1.1 Syllabus	12
1.2 General resources	12
1.3 Preoperative evaluation	18
1.3.1 Lung function evaluation	18
1.3.2 Cardiac function evaluation	20
1.3.3 Obesity-related problems	20
1.4 Open lung biopsy	20
1.5 Tracheal resection	21
1.6 Differential lung ventilation	21
1.7 Thymectomy and myasthenia gravis	21
1.8 Bilateral pleurectomy via sternal split	22
1.9 Lung-volume reduction surgery	22
1.10 Management of flail-chest	23
1.11 Pneumothorax	23
1.11.1 Radiology	23
1.11.2 Cavity expansion with N ₂ O	23
1.11.3 Chest drains	24
1.11.4 Chest-drain bottles	24

1.11.5	Subcutaneous emphysema	25
1.12	Empyema	25
1.13	Sickle cell disease	25
1.13.1	Anaesthesia	25
1.13.2	The transfusion controversy	27
1.13.3	Managing sickle-cell crisis	27
1.13.4	Pathophysiology	28
1.13.5	Haemoglobin molecular-chemistry	28
1.13.6	HbS & O ₂ dissociation curve	29
2	Epidural block	30
2.1	Anatomy	31
2.1.1	The epidural database (TEPID)	32
2.2	General aspects	33
2.2.1	Awake or under GA?	33
2.2.2	Midline approach	33
2.2.3	Paramedian approach	33
2.2.4	Reducing catheter migration/fallout	34
2.2.5	Radiographic placement	34
2.2.6	Fibreoptic guided placement	34
2.3	Drugs	34
2.4	Complications	36
2.4.1	Epidural catheter disconnection	36
2.4.2	Abscess	36
2.4.3	Haematoma & DVT prophylaxis	37
2.5	Paravertebral block	37
3	Tracheostomy & related airway problems	40
3.1	Introduction	41
3.1.1	Local anaesthetic for fibreoptic bronchoscopy of the trachea	41
3.2	Tracheostomy tubes	41
3.2.1	Portex	42
3.2.2	Tracoe	42
3.2.3	Rüsch	43
3.2.4	Moore tube	43
3.3	Tracheostomy—when?	43
3.4	Percutaneous tracheostomy	43
3.5	Surgical tracheostomy	45
3.5.1	Recommendations	45
3.6	Changing a tracheostomy tube	49
3.6.1	Preparation	50
3.6.2	Changing the tube	51
3.6.3	Check the position bronchoscopically	52

3.7	Anaesthetising a patient with a laryngectomy	52
3.8	Anaesthetising a patient with a tracheostomy in situ	52
3.8.1	Postoperative management	54
3.9	Montgomery T-tube placement	54
3.10	Difficult airway & trans-tracheal needle ventilation	54
3.11	Miscellaneous problems	55
3.11.1	Obstruction	56
3.11.2	Difficulty inserting the inner tube	57
3.11.3	Air leak	57
3.11.4	Tracheostomy recently removed	58
4	Lung anatomy	59
4.1	Anatomical terms	59
4.2	History of lung anatomy	61
4.2.1	Bronchopulmonary segment	61
4.3	Lung development & embryology	63
4.4	Nomenclature	64
4.4.1	Right lung	64
4.4.2	Left lung	64
4.5	Carina	65
4.5.1	Factors moving the carina	65
4.6	Right-upper lobe orifice	66
4.7	Aberrant bronchus	66
4.8	References	74
5	Fibreoptic bronchoscopy	78
5.1	History	79
5.2	Bronchoscopy simulator	80
5.3	Carina	80
5.4	Left subcarina & beyond	81
5.5	Right subcarina & beyond	83
5.6	Image orientation	85
5.6.1	Axial rotation	85
5.6.2	Bending	86
5.6.3	Camera-mode	86
5.7	Anaesthesia for bronchoscopy	87
5.7.1	Short duration	87
5.7.2	Long duration	87
5.7.3	Local anaesthesia & sedation	89
5.7.4	Venturi jet ventilation	89
5.8	References	89
5.8.1	Complications	90
5.8.2	Fibreoptic intubation	90

6	Tubes and bronchus blockers	92
6.1	The Univent tube, 1984	92
6.2	The Hunsaker jet ventilation tube	93
6.3	Bronchus blockers	93
6.4	Double-lumen tubes	94
6.4.1	History	94
6.4.2	The <i>BronchoCath</i>	96
6.4.3	The tube database (TEPID)	97
7	One-lung anaesthesia	100
7.1	Right double-lumen tube	100
7.2	Left double-lumen tube	100
7.3	Placing double-lumen tubes	101
7.3.1	Preparation	102
7.3.2	Intubation	103
7.3.3	Stethoscope check	105
7.3.4	Bronchoscopy — left-sided tube	106
7.3.5	Bronchoscopy — right-sided tube	109
7.3.6	Final tidal volume and pressure check	110
7.4	Turning the patient laterally	110
7.5	One-lung anaesthesia	111
7.5.1	Preparation	112
7.5.2	One-lung ventilation	112
7.5.3	Management of one-lung anaesthesia	113
7.5.4	Returning to two-lungs	115
7.6	Turning the patient supine	115
7.7	Extubation	116
7.8	Complications	116
7.8.1	Intraoperative	116
7.8.2	Postoperative	117
7.9	General references	119
7.9.1	Tracheostomy and one-lung ventilation	122
7.9.2	One-lung anaesthesia	123
7.9.3	Tracheal bronchus	124
7.9.4	Physiology & pathology	124
7.9.5	Flow/pressure/volume loops	125
8	Drugs	126
8.1	Cardiovascular drugs	126
8.1.1	Infusions: dilutions and use	128
8.1.2	Bolus dosage	129
8.1.3	Noradrenaline	130
8.1.4	References	131

8.2	Somatostatin analogues & carcinoid	133
8.2.1	Octreotide	133
8.2.2	Ketanserin	133
8.2.3	Carcinoid tumours	133
8.2.4	Anaesthesia for bronchial carcinoid resection	133
8.2.5	References	136
8.3	Haemostatic drugs	138
8.4	Remifentanyl	138
8.4.1	Bolus	138
8.4.2	Infusion	139
8.4.3	References	139
9	Supporting technologies	141
9.1	Serendipity	142
9.2	Tuohy needle with Huber point and Lee markings	143
9.3	Pulse oximetry	144
9.4	MAC	146
9.4.1	History	146
9.4.2	Age-corrected MAC	151
9.4.3	Temperature corrected MAC	157
9.4.4	Dosage and MAC correction	157
9.4.5	References	161
9.5	Arterial line	166
9.5.1	History	166
9.5.2	Anatomy	167
9.5.3	Allen test	168
9.5.4	Systolic pressure variation	170
9.5.5	Complications	170
9.6	Central venous catheter	171
9.6.1	History	171
9.6.2	References	174
9.6.3	Optimum position	176
9.6.4	Anatomy	176
9.6.5	Position of CVP tip	177
9.6.6	General	178
9.6.7	Ultrasound guided	179
9.6.8	External jugular vein	180
9.6.9	Axillary vein	180
9.6.10	Femoral vein	181
9.6.11	Complications	182
9.7	Pulmonary artery catheter	183
9.7.1	History	183

9.7.2	Decline in use	186
9.8	Computers & information technology	187
9.8.1	History of the anaesthesia record	187
9.8.2	The anaesthesia workstation	189
9.8.3	References	191
Colophon		196
